

Seamless Event-Driven Integration with the ASAPIO Integration Add-on: Efficiency in Data Connectivity

Challenges we had

- SAP data to be reported out of our datalake
- Complex technology to export data from SAP
- Availability of SAP dynamic data in our planning solution

Why we Chose the ASAPIO Integration Add-on

- Standard solution as add-on to SAP ECC (and SAP S/4HANA)
- Achieve results due to no code/low code capabilities
- Predefined content makes it easier to implement business use cases

Value Achieved

- Improved responsiveness due to near real-time data flow
- Increased cost efficiency (less custom development and lower implementation costs)

'Thanks to the ASAPIO Integration Add-on, we are able to have our data available for reporting in our datalake and can use our dynamic data for planning purposes'

Erik de Vries, Project manager ICT, KWS Vegetables

Use Case

- Sending logistic data like sales orders, shipments, invoice, purchase orders, inbound receipts and inventory levels to our Azure Blob Storage
